

Rivestimenti

AVVERTENZE GENERALI

Le immagini presenti sono indicative, si consiglia sempre di consultare la cartella rivestimenti e finiture con i campioni reali.

Lievi variazioni di colore e tonalità possono derivare dal processo produttivo del materiale.

I colori chiari non devono essere messi a contatto con tessuti e capi d'abbigliamento trattati con coloranti non fissati, o con scarse solidità di tintura, onde evitare macchie ed aloni di coloranti di cui non possiamo garantire la pulitura.

I tessuti spalmati (ecopelli) possono essere sanificati superficialmente come da decreto del Ministero della Salute con soluzioni di acqua e alcool etilico al 70% e prodotti disinfettanti commerciali pronti all'uso. Si consiglia di provare il prodotto su un angolo nascosto della superficie da pulire.

Evidenziamo speciali trattamenti, antimicrobici, antibatterici e antimicotici, che caratterizzano da sempre alcuni nostri rivestimenti, per creare un'efficace barriera difensiva contro batteri, acari e funghi, uniti ad eccezionali caratteristiche di praticità e durata nel tempo.

AVVERTENZE GENERALI

Le immagini e i riferimenti dei codice colori sono indicativi, si consiglia sempre di consultare la cartella rivestimenti e finiture con i campioni reali.

I prodotti con materiale riciclato (PSV plastica seconda vita) possono presentare piccole variazioni di colore o lievi imperfezioni superficiali da considerarsi caratteristiche intrinseche del processo e garanzia dell'effettivo impiego di materiale riciclato.
